

Work Experience

- **Web FrontEnd Developer at Yahoo** *(Aug 2010 onwards)*
 - **PostCard Calendar** - I am a major contributor to the latest Calendar front-end redesign.
 - **Corp Calendar** - Implemented the key front-end pieces in Corp Calendar, like free busy module, room availability and location autocomplete.
 - **Minty Fresh Calendar and Notepad** - Major challenge here was to come up with an architecture by which we can have both the old and the new versions of calendar working in tandem. The solution that I designed, not only prevented code duplication but also provided complete code isolation and no impact in performance. This solution was later adopted for postcard calendar and also by contacts team.
 - I helped in reducing the JS Errors in Calendar by 90%
 - **Multi Lang Support in Yahoo! Mail** - Initially Minty Mail used to support only one language per intl. So to change the language a user had to change his/her intl. So with my contribution, we were able to allow user to choose any language without the need to switch intls.
 - **Partner Support in Yahoo! Mail** - From mail FE side, I managed the onboarding for many partners like Nokia, MTS, etc.
 - **Setting up experimentation framework for Yahoo! Mail** - Worked with the Renaissance team to set up the experimentation framework for YMail.
 - **YRooms** - This was an iOS app for internal Yahoos. The app gives you a list of all the available rooms nearby and book it from the app. [Demo Code](#)
 - **Cool-Cal** - This was an iOS app which displayed a calendar with all the basic functionality. One feature that we added was the conf dialer. [Demo Code](#)
